

C o n c r e t e T i l e R o o f s

Strategies may come and go, but a strong company culture defines the soul of an organization. At Eagle, our culture emphasizes service: to the team member, customer and supplier. There are choices, and we want your choice to be Eagle.

Vision

Eagle Roofing Products wants to be the company of choice by:
Our Team Members and their families.
Our Customers and their customers.
Our Suppliers.

Unmatched Customer Service

The Eagle Way is our commitment to listening to customers and reacting to meet their needs. We have one of the largest sales forces in the industry, and it is organized into teams that handle the needs of particular groups of customers.

Eagle is also the only concrete tile manufacturer with Design Centers across the country. Design Centers are open to the public and allow homeowners to see our tile in person and make an informed color choice with the help of a design professional.

Eagle is always working to be your company of choice

Concrete Tile Roofs. Beautiful and Durable.

Eagle's concrete tile roofs are a smart choice for your home. Whether your interest is durability, color selection or energy efficiency, Eagle concrete roof tile is an easy choice over other roofing materials.

Eagle Concrete Tile Roofs

Asphalt Roofs

Durability

According to a recent study from the National Association of Home Builders and Bank of America, a concrete tile roof will last a lifetime.

- Class A Fire Rating
- Tested to Class 3 and 4 Hail Resistance. Check with your insurance company for possible discounts.
- Standard Weight tile passes Freeze/Thaw requirements
- Exceeds current seismic load requirements

According to a recent study from the National Association of Home Builders and Bank of America, an asphalt roof will only last for 20 years.

Warranty

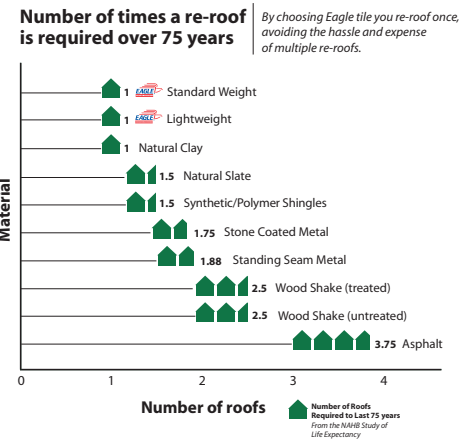

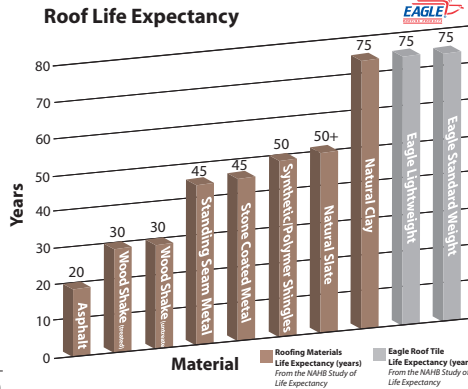

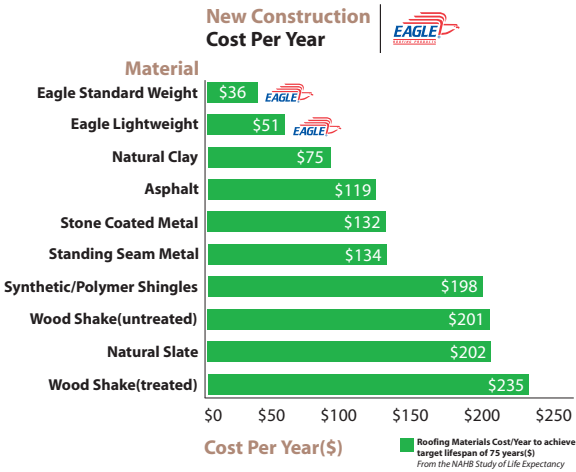

Eagle provides a lifetime transferable warranty on all concrete tile. Always.

Asphalt's standard warranty is 15 years. Typically, anything over the standard warranty must be purchased at an additional charge.

Affordability

The life-cycle cost of a concrete tile roof is very affordable.

An asphalt roof can actually end up costing more over the life of the home.

Beauty. Curb Appeal.

Eagle concrete tile roofs are available in a multitude of profiles and colors that emulate traditional roofing materials like clay, slate and wood.

Fairly limited color range. No barrel or dimensional materials.

History. Longevity.

Tile roofs have been used for centuries in Europe. Their durability and lasting beauty have been proven time and again.

Asphalt roofs are fairly recent development. As stated previously, the typical lifespan of an asphalt roof is only 20 years.

Green building Environmentally friendly

Eagle makes an effort to be responsible about recycling and re-use activities in the production of our tile. We are a leader in these efforts, including:

- Reject tile is crushed and reintroduced
- Tile mold release oil is recycled from restaurant fryers
- Our curing chambers employ a low nox process
- All sealers are water based
- Engine oil and filters from plant equipment are recycled

In addition, concrete tile can be recycled once it's removed from a roof. It does not add to landfills.

Asphalt is made in an environmentally questionable process. Once its short life is over, it can only be disposed of in landfills.

Energy Saving Roof

Eagle offers the Energy Saving Roof which is an installation method that creates ventilation in the roof, thus helping to prevent heat transfer into the home. This reduces the need for air conditioning and results in energy savings.

Asphalt does not offer such a system.

Cool Roof Tile

Eagle offers Cool Roof Rating Council approved colors that can result in 10-30% energy savings. We do not charge a premium for these products.

Offered in very limited color selection and at a premium price.

Solar Roof

Eagle has worked with a solar panel manufacturer to develop the Eagle Solar Roof. This combination of solar panels and tile results in a roof that performs while producing electricity.

Most asphalt companies do not have such a relationship with a solar manufacturer and therefore can't offer the same level of performance in a solar system.
